Solutions for the High Output Laundry

Industrial design with smart engineering. Sea-lion's 225-pound industrial open pocket washer-extractors are available in stationary, forward tilting and two-way tilting models. These rugged work horses are engineered to last. They have a low total cost of ownership and produce superior wash results. The open structure aids in access for maintenance and repairs.

Industrial Washer-Extractor

 XGQ-100CF series washer-extractors have a small and compact footprint that incorporates a slight 2 degree backwards washing angle. This design along with integrated lifting ribs optimizes mechanical wash action.

 Inverter with single motor drive is energy efficient, has fewer parts, and provides smooth power at all speeds.

 Models fitted with tilt feature a robust hydraulic tilting mechanism that provides for an 18 degree tilting angle coupled with large diameter door opening which facilitates loading and unloading of goods.

 Multi-language full color touch screen control features full programmability of all machine functions including interfacing up to 13 signals to external chemical systems, and displays relevant machine operating data, including a full array of maintenance and productivity reports.

 Machine's open structure design incorporates an innovative spring and shock suspension system located higher on the frame to better reduce vibration.

 Available with new Water Droplet drum design.
